

Curriculum Vitae

Shu Hu

PhD Student · Department of Microbiology · Fudan University
shu25@m.fudan.edu.cn | hushuzuiniu.github.io

EDUCATIONAL BACKGROUND

Fudan University	Sep 2025 – Jun 2029 (expected)
PhD student in Microbiology Department of Microbiology, School of Life Sciences	
The University of Edinburgh	Sep 2021 – Nov 2022
MSc in Bioinformatics, with Merit	
Sichuan Agricultural University	Sep 2016 – Jun 2020
BSc in Biological Science GPA: 3.8/5.0; average mark: 88/100.

RESEARCH AND PROFESSIONAL EXPERIENCE

The University of Hong Kong | Research Assistant I

2023–2024

- Conducted bioinformatics analyses of viral evolution and genomic epidemiology, with a focus on influenza and RSV.
- Integrated genomic, clinical and immunological datasets and contributed to collaborative research publications.
- Contributed to research integrating contact-tracing data with phylogenetic analysis for outbreak inference; co-authored the resulting Molecular Biology and Evolution paper (2024).
- Participated in genomic epidemiology studies of avian influenza in Cambodia and southern China, contributing to publications in NEJM and Journal of Virology (2025).

Shanghai Rightongene Technology Co., Ltd. | Bioinformatics Engineer

2024 – May 2025; Sep 2022 – May 2023

- Developed analysis methods for BCL6, BCL2 and MYC gene fusions in DLBCL sequencing workflows, addressing discrepancies between NGS and FISH results.
- Established low-depth whole-genome sequencing workflows for copy-number analysis using QDNAseq, Control-FREEC and ichorCNA.
- Built upstream and downstream single-cell RNA-seq workflows and collaborated with IT colleagues to deploy analyses on an automated platform.
- Developed RNA-seq expression-based models for leukemia molecular subtyping.

The University of Edinburgh | MSc Research

Feb – Sep 2022

- Developed reusable Shiny modules and R scripts for interactive exploration of RNA-seq datasets during MSc study at the University of Edinburgh.

Sichuan WoWente Biotechnology Co., Ltd. | Reagent Developer

May 2020 – May 2021

- Contributed to sex-hormone immunoassay reagent development and an inhibin A (INH-A) project.

DATA ANALYSIS SKILLS

Programming and computing: R, Python, Linux, Shell, Docker, SQL

Genomic data analysis: RNA-seq, single-cell RNA-seq, whole-genome sequencing, copy-number analysis and workflow development

Evolution and modelling: Phylogenetics, BEAST, Nextstrain, statistical analysis and deep learning

Visualisation and tools: R Shiny, interactive data exploration and scientific visualisation

RESEARCH SOFTWARE

github.com/hushuzuiniu

Single-cell RNA-seq workflows · RNA-seq molecular subtyping · R Shiny tools
